DETAILED ACTION

1. This Office Action is written in response to the After-Final Amendments filed January 28th, 2008.

Allowable Subject Matter

2. Claims 14 – 16, 18 – 29 and 31 – 34 are allowed.

3. With respect to independent claims 14, 26, 33 and 34, the allowability resides in the overall structure of the device at least in part because of the transformer, transistor switch, control unit, and blanking window circuit configured to prevent the control unit from disabling switching of the transistor in the case that the signal is below the second lower threshold value for less than a preset period of time as claimed.

The aforementioned limitations in combination with all remaining limitations of claims 14, 26, 33 and 34 are believed to render said claims and all claims dependent therefrom patentable over the art of record.

4. With respect to independent claim 22, the allowability resides in the overall structure of the device at least in part because of a current limitation circuit arranged to receive a first signal indicative of the current through the primary of the transformer and to limit the current pulses responsive to a signal that is indicative of a condition in which both the first signal indicates that the current is above a burst mode threshold value and the memory device indicates that the switching mode power supply is operating in the burst mode.

The aforementioned limitations in combination with all remaining limitations of claim 22 are believed to render said claim and all claims dependent therefrom patentable over the art of record.

Response to Arguments

5. Applicant's amendments and arguments, filed January 28th, 2008, have been fully considered and are persuasive. The rejection of all claims has been withdrawn.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Imazeki et al. (US 4,330,816), Elliott et al. (US 5,029,269), Spampinato et al. (US 6,061,257), Yimada (US 6,134,123), Allen et al. (US 6,538,419) and Yang et al. (US 6,674,656) all teach switch mode power supplies similar to that of the present application.
